0.1 Lobbying Network Analysis of Controversial Protest Buffer Bills

Background & Research Question The New York City City Council recently passed a bill focused on limiting protests around places of worship. There is a sister bill that does the same for Educational institutions. These controversial bills (Int. 001 and Int. 175) are opposed by institutions like the NYCLU, and other political factions that argue such legislation would limit free speech in unconstitutional. Especially in a place as dense as New York City. For the sake of this project, I will be attempting a network analysis on the organizations that worked to lobby NYCCC Members that sponsored at least one of the two bills - Intro. 001. I'm taking a look at the sponsors of this bill and then subsequently looking at the related lobbying information for early 2026, specifically January through February, to see what the network of entities that lobbied those elected officials on this matter. Ideally, such an analysis can reveal information about the coalitions and power brokers driving this legislation?

Research Question: Which client organizations formed the core lobbying coalition behind Int. 001 & Int. 175, which actors served as structural brokers connecting otherwise disconnected parts of that coalition, and which council member sponsors were the most strategic targets of the lobbying effort?

```

[102]: print("FREQ DIST: TOP 20 CLIENT ORGANIZATIONS")
## looking at the top clients based on the number of times they show up in the
data, or basically how many times they lobbied for these bills.
fdist_clients = FreqDist(final_universe_lim['client_clean'].dropna())
for client, count in fdist_clients.most_common(20):
    print(f" {count:>4} {client}")
```

```
FREQ DIST: TOP 20 CLIENT ORGANIZATIONS
288  new york civil liberties union inc
140  girls for gender equity inc gge
95   urban justice center
12   orange barrel media llc
8    anti-defamation league
7    service employees international union local 32bj
3    united jewish appeal-federation of jewish philanthropies of new york inc
2    detectives endowment association police department city of new york inc
2    correction officers' benevolent association inc
2    captains' endowment association of the police department of the city of
new york inc the
2    new york city central labor council afl-cio
2    lieutenants benevolent association of the city of new york inc
```

Taking a look at this the Top lobbying client was the NYCLU, which as I mentioned before is a prominent opponent to this legislation. The other top clients that did a lot of lobbying on these bills are the Urban Justice Center, Girls for Gender Equality, Orange Barrel Media, the anti-defamation league, and SEIU 32BJ. Beyond these clients, there are other than only have 2 appearances in the data, so these entities did not lobby as much.

```
[103]: print("FREQ DIST: TOP 20 LOBBYIST FIRMS")
fdist_lob = FreqDist(final_universe_lim['lobbyist_clean'].dropna())
for firm, count in fdist_lob.most_common(20):
    print(f" {count:>4} {firm}")

12 fontas advisors ny llc
10 pitta bishop del giorno llc
8 anti-defamation league
7 service employees international union local 32bj
3 united jewish appeal-federation of jewish philanthropies of new york inc

```

Taking a look at this, NYCLU, GGE, the Urban Justice Center, the ADL, and SEIU 32BJ all did not hire another firm for lobbying work, but rather lobbied themselves. Other firms did seem to hire some lobbying firms to help with their efforts.

```

[105]: print("FREQ DIST: COUNCIL MEMBERS LOBBIED")
      ### Further cleaning staff member versus the actual official in order to be
      able to say "the office was lobbied"
      final_universe_lim['party_clean_office'] = final_universe_lim['party_clean'].
      astype(str).str.replace('staff member','').str.strip()
      fdist_cm = FreqDist(final_universe_lim['party_clean_office'].dropna())
      for cm, count in fdist_cm.most_common(20):
          print(f" {count:>4} {cm}")

```

```

FREQ DIST: COUNCIL MEMBERS LOBBIED
312 nyc council member julie menin
50  nyc council member kevin riley
36  nyc council member eric dinowitz
28  nyc council member tyrell hankerson
28  nyc council member darlene mealy
28  nyc council member farah n louis
28  nyc council member mercedes narcisse
26  nyc council member gale brewer
20  nyc council member nantasha williams
2   nyc council member yusef salaam
2   nyc council member shanel thomas-henry
2   nyc council member oswald feliz
1   nyc council member lynn schulman

```

Taking a look at the city council members that were lobbied on this, by far the one most lobbied was Julie Menin the current speaker. Her office was lobbied a total of 312 times, according to the data. In second place, is Kevin Riley, with a large drop of in instances lobbied, he was lobbied 50 times. In third was Eric Dinowitz who was lobbied 36 times. All the other NYCCC members were lobbied 20 times or less.

0.1.3 Starting with the Network

```

[109]: ### Putting the final cleaned universe into a network with network x for
      analysis.
      ### Clients and NYCCC Members are nodes with the edges being weighted by the
      number of times lobbied.
      ### We're going to keep in lobbying firms as edge attributes as well as the
      compensation spent lobbying

```

```

B = nx.Graph()
for _, row in final_universe_lim.iterrows():
    client = "C:" + str(row['client_clean'])
    council = "M:" + str(row['party_clean_office'])
    comp = int(row['compensation']) if pd.notna(row['compensation']) else 0
    firm = str(row['lobbyist_clean'])
    subject = str(row['subject_clean']) if pd.notna(row['subject_clean']) else ''

    # Lobbying clients, essentially those wanting to influence policy
    B.add_node(client)
    B.nodes[client].setdefault('node_type', 'client')
    B.nodes[client].setdefault('filing_count', 0)
    B.nodes[client].setdefault('total_comp', 0)
    B.nodes[client].setdefault('firms', set())
    B.nodes[client]['filing_count'] += 1
    B.nodes[client]['total_comp'] += comp
    B.nodes[client]['firms'].add(firm)

    # Council member nodes
    B.add_node(council)
    B.nodes[council].setdefault('node_type', 'council_member')
    B.nodes[council].setdefault('filing_count', 0)
    B.nodes[council].setdefault('total_comp', 0)
    B.nodes[council]['filing_count'] += 1
    B.nodes[council]['total_comp'] += comp

    # Keeping the other info as attribs
    if B.has_edge(client, council):
        B[client][council]['weight'] += 1
        B[client][council]['comp'] += comp
        B[client][council]['firms'].add(firm)
    else:
        B.add_edge(client, council,
                    weight=1, comp=comp, firms={firm})

```

```

[111]: ### Specific sets of nodes for the two types (adding prefix for no confusion
        with names)
client_nodes = {n for n in B.nodes() if n.startswith('C:')}
council_nodes = {n for n in B.nodes() if n.startswith('M:')}

print(f" The number of clients who sought to lobby elected officials on these
two bills: {len(client_nodes)}")
print(f" The number of NYCCC Members that were lobbied on these two bills:
{len(council_nodes)}")
print(f" The connections / edges for these two sets of nodes: {B.
number_of_edges()}")

```

```
print(f" Bipartite COnfirmation (why we had the prefixes): {bipartite.
↳is_bipartite(B)}")
print(f" Graph density (of all connections that could exist, how many do.):␣
↳{nx.density(B):.4f}")
```

The number of clients who sought to lobby elected officials on these two bills:
12

The number of NYCCC Members that were lobbied on these two bills: 13

The connections / edges for these two sets of nodes: 24

Bipartite COnfirmation (why we had the prefixes): True

Graph density (of all connections that could exist, how many do.): 0.0800

Taking a look at these graph stats. There are 12 clients lobbying 13 NYCCC Members on these bills. There are a total of 24 edges / connections in this graph between the node types. The graph density is low (~8%) meaning the lobbying efforts were focused on a small subset of NYCCC sponsors of the bill.

```
[115]: ### Projecting the bipartite graph into one dimensions, specifically for␣
↳clients.
### Allows us to see potential lobbying coalitions for those attempting to␣
↳influence
### Essentially those that lobbied the same officials, with the officials␣
↳removed are now connected.
G_client = bipartite.weighted_projected_graph(B, client_nodes)
G_client = nx.relabel_nodes(G_client, {n: n[2:] for n in G_client.nodes()})
for node in G_client.nodes():
    pref = "C:" + node
    G_client.nodes[node]['filing_count'] = B.nodes[pref].get('filing_count', 0)
    G_client.nodes[node]['total_comp'] = B.nodes[pref].get('total_comp', 0)

print(f"Client projection edges : {G_client.number_of_edges()}")
print(f"Client graph density: {nx.density(G_client):.4f}")
```

Client projection edges : 39

Client graph density: 0.5909

There are a total of 39 edges in the data and the density is ~60%. This means that more than half of the clients lobbying on this bill lobbied the same city council members. The high overlap indicates a potential lobbying coalition, at least for those that share the same stance on the bills. Regardless, those lobbying on this bill seem to have similar strategies on who needs to be aligned with their stance in order to stop/progress the bills.

```
[116]: ### Similarly now were taking a look at the NYCCC Member side of the biopartite␣
↳graph to see the network of those in power that
### were lobbied on these bills.
G_council = bipartite.weighted_projected_graph(B, council_nodes)
G_council = nx.relabel_nodes(G_council, {n: n[2:] for n in G_council.nodes()})
for node in G_council.nodes():
    pref = "M:" + node
```

```

G_council.nodes[node]['filing_count'] = B.nodes[pref].get('filing_count', 0)
G_council.nodes[node]['total_comp']    = B.nodes[pref].get('total_comp', 0)

print(f" Council projection edges: {G_council.number_of_edges()}")
print(f" Council graph density   : {nx.density(G_council):.4f}")

```

```

Council projection edges: 27
Council graph density   : 0.3462

```

There are a total of 27 different edges present along with a density of about ~35%. This means that about 1/3 of the potential links for these NYCCC members were made.

So far the numbers from both of these projections imply that those clients that were lobbying for/against these bills were related entities targeting a subset of NYCCC members.

Additionally, the NYCCC side of the graph is less dense meaning that there was more targeted effort for NYCCC members. This suggests that while clients moved as a bloc, their lobbying was more targeted toward specific council members rather than blanketing all sponsors equally. This aligns with the over 300 instances of Speaker Menin's office being lobbied. With the steep drop off for the runners up.

0.1.4 Looking at Centrality measures in this section

```
[127]: pd.options.display.max_colwidth = 200
```

Degree Centrality

```

[130]: ### For the Client side of the equation

7      nyc council member yusef salaam     0.333333
12     nyc council member oswald feliz     0.333333
5      nyc council member gale brewer      0.250000
6      nyc council member eric dinowitz    0.250000

```

1 nyc council member lynn schulman 0.083333

Overall when looking at degree centrality here for the client and the Council Member side, one can infer that Orange Barrel Media has the most target overlap with other clients lobbying council members. While the outliers, and potential “out of the box” strategy thinkers for their influence on the bill was the SEIU 32BJ and GGE, as they had the lowest centrality scores. In short, they didn't necessarily lobby the same NYCCC Members all the other clients did.

Similarly, Kevin Riley, Julie Menin, and Nantasha Williams were the NYCCC members that had the most overlap for those clients lobbying officials. Where Lynn Schulman, with the lowest degree centrality, was lobbied on this bill, by the more peripheral clients.

Betweenness Centrality

```
[229]: ### Client Side
between_cent = nx.betweenness centrality(G_client, weight='weight',
↪normalized=True)
client_between_cent = pd.DataFrame([between_cent]).T
client_between_cent = client_between_cent.reset_index()
client_between_cent.columns = ['Client', 'Between Centrality']
client_between_cent.sort_values(by='Between Centrality', ascending=False)
```

Between Centrality

10	0.436364
6	0.345455
0	0.000000
1	0.000000
3	0.000000
2	0.000000
5	0.000000
4	0.000000
7	0.000000
8	0.000000
9	0.000000
11	0.000000

Only two clients got a Between Centrality score that is over 0, they were Orange Barrel Media and the Urban Justice Center. Both of these lobbying clients and their efforts were the ones that arguably transcended the traditional coalitions as they seemed to be the connections between the different factions concerned about the bill.

```
[139]: ### Council Member Side
between_cent = nx.betweenness centrality(G_council, weight='weight',
↪normalized=True)
council_between_cent = pd.DataFrame([between_cent]).T
council_between_cent = council_between_cent.reset_index()
council_between_cent.columns = ['NYCCC_MEMBER', "Between Centrality"]
council_between_cent.sort_values(by='Between Centrality', ascending=False)
```

```
[139]:
```

	NYCCC_MEMBER	Between Centrality
10	nyc council member nantasha williams	0.530303
2	nyc council member kevin riley	0.484848
9	nyc council member julie menin	0.166667
0	nyc council member farah n louis	0.000000
1	nyc council member lynn schulman	0.000000
4	nyc council member darlene mealy	0.000000
3	nyc council member shanel thomas-henry	0.000000
5	nyc council member gale brewer	0.000000
6	nyc council member eric dinowitz	0.000000
8	nyc council member tyrell hankerson	0.000000
7	nyc council member yusef salaam	0.000000
11	nyc council member mercedes narcisse	0.000000
12	nyc council member oswald feliz	0.000000

Based on the betweenness centrality, NYCCC Member Natasha Williams and Kevin Riley had the highest scores here. With Julie Menin in third. All the other NYCCC Members had a score of 0. This means that these members (Williams and Riley) were approached by lobbying clients that did not otherwise overlap with one another. They connected discrete portions of these lobbying coalitions, which implies a strategic targeting by lobbyists. This could imply a higher degree of power pertaining to these bills in this instance for these members.

PageRank

[143]: ## Council Side
pagerank = nx.pagerank(G_council, weight='weight')
council_pr= pd.DataFrame([pagerank]).T
council_pr = council_pr.reset_index()
council_pr.columns = ['NYCCC_MEMBER', "PageRank"]
council_pr.sort_values(by='PageRank', ascending=False)
```

```
[143]:
```

	NYCCC_MEMBER	PageRank
10	nyc council member nantasha williams	0.123441
2	nyc council member kevin riley	0.120396
9	nyc council member julie menin	0.098571
3	nyc council member shanel thomas-henry	0.075279
7	nyc council member yusef salaam	0.075279
12	nyc council member oswald feliz	0.075279
8	nyc council member tyrell hankerson	0.072157
0	nyc council member farah n louis	0.072157
4	nyc council member darlene mealy	0.072157
11	nyc council member mercedes narcisse	0.072157
5	nyc council member gale brewer	0.057415
6	nyc council member eric dinowitz	0.057415
1	nyc council member lynn schulman	0.028296

Looking at the PageRank scores for both the client side of things and the council member side similar trends show up.

For the NYCCC Members, again Natasha Williams, Kevin Riley and Julie Menin round out the top three scores. This means that these three were lobbied by the client organizations that were most foundational to the lobbying work on this bill. Those clients that were central to the lobbying on this bill focused heavily on these three individuals.

Similarly for the client side of the data, orange barrel media llc had the highest pagerank, meaning it targeted the same members as other lobbying clients on this bill. It put its efforts behind those NYCCC Members that were also targeted by the most central clients on this issue.

0.1.5 Who are the Power Brokers?

```
[158]: ### Taking a look at the constraint score, as this would show how niche / boxed
↳ in, or how connected a node is.
### The lower the constraint score the less boxed in the node is, meaning its
↳ more connected, bridges otherwise unconnected portions of
### the network, and is more important for the network's connectivity

constraint_client = nx.constraint(G_client)
client_constraint = pd.DataFrame([constraint_client]).T
client_constraint = client_constraint.reset_index()
client_constraint.columns = ['Client', 'Constraint Score']
client_constraint = client_constraint.sort_values(by='Constraint Score',
↳ ascending=True)
### Flag the top brokers - bottom 15% of constraint scores
```

```
threshold = client_constraint['Constraint Score'].quantile(0.15)
client_constraint['Is Power Broker'] = client_constraint['Constraint Score'] <= threshold

print(f"Broker threshold (15th percentile constraint): {threshold:.4f}")
print(client_constraint.to_string(index=False))
```

Broker threshold (15th percentile constraint): 0.4078

Client	Constraint Score	Is Power Broker	
			urban
justice center	0.333333	True	
			orange barrel
media llc	0.359568	True	
			detectives endowment association police department city of new
york inc	0.433778	False	
			united jewish appeal-federation of jewish philanthropies of new

defamation league	0.433778	False	
			correction officers' benevolent
association inc	0.433778	False	
			service employees international union
local 32bj	1.000000	False	
			girls for gender equity
inc gge	1.000000	False	

If we take a look at the constraint score, and assume a more connected node (lower constraint score) that holds the network together is more of a “power broker” urban justice center and orange barrel media are the “power brokers” for the lobbying clients. These two organization’s lobbying efforts targeted NYCCC members that bridged more hypothetical political coalitions. This makes sense, at least with a client such as orange barrel media. As a media company, and not a non-profit or advocacy organization, it would make sense that this non traditional player would span multiple “coalitions” and bridge much of this network together beyond the more typical alliances.

```
[151]: ### NYCCC Side of the "power broker" analysis.
constraint_council = nx.constraint(G_council)

council_constraint = pd.DataFrame([constraint_council]).T
council_constraint = council_constraint.reset_index()
council_constraint.columns = ['Council Member', 'Constraint Score']
```

```

council_constraint = council_constraint.sort_values(by='Constraint Score',
↪ascending=True)

threshold_cm = council_constraint['Constraint Score'].quantile(0.15)
council_constraint['Is Power Broker'] = council_constraint['Constraint Score']
↪<= threshold_cm

print("=== COUNCIL MEMBER POWER BROKERS - Structural Holes (SNA Ch.4) ===")
print(f"Broker threshold (25th percentile constraint): {threshold_cm:.4f}")
print()
print(council_constraint.to_string(index=False))

```

```

=== COUNCIL MEMBER POWER BROKERS - Structural Holes (SNA Ch.4) ===
Broker threshold (25th percentile constraint): 0.4682

```

	Council Member	Constraint Score	Is Power Broker
	nyc council member nantasha williams	0.385073	True
	nyc council member kevin riley	0.395634	True
	nyc council member julie menin	0.486378	False
nyc council member shanel thomas-henry		0.666460	False
	nyc council member yusef salaam	0.666460	False
	nyc council member oswald feliz	0.666460	False
	nyc council member eric dinowitz	0.667926	False
	nyc council member gale brewer	0.667926	False
	nyc council member mercedes narcisse	0.697465	False
	nyc council member tyrell hankerson	0.697465	False
	nyc council member darlene mealy	0.697465	False
	nyc council member farah n louis	0.697465	False
	nyc council member lynn schulman	1.000000	False

Looking at the council member side's constraint scores, there are also a few NYCCC members that could be deemed "power brokers". Again, with the assumption that those nodes that are holding together, or bridging, the network more than most are members that different coalitions may think to be convinced of their position on the bill. NYCCC members with lower constraint scores were targeted by lobbying organizations that are more "disconnected" from a larger coalition or campaign. They are targets of those that don't overlap with one another, so essentially in the middle of multiple disconnected lobbying efforts.

0.1.6 Community Detection

Using greedy modularity maximization, which starts with one individual node and examines which other nodes, when joined with the starting node, increases the modularity score of the group the most. Using this, to max out various clusters' modularity scores, we can discern the various "communities" in the network. We're going to use the weight of the edges in order to determine, as beyond money, the number of times lobbied is critical for identifying a proxy for this type of relationship mapping.

```
[164]: client_communities = list(nx_comm.greedy_modularity_communities(G_client,
    ↪weight='weight'))
client_modularity = nx_comm.modularity(G_client, client_communities,
    ↪weight='weight')

client_comm_map = {}
for i, comm in enumerate(sorted(client_communities, key=len, reverse=True)):
    for node in comm:
        client_comm_map[node] = i
### Client Communities and Goodness
print(f"Number of communities detected : {len(client_communities)}")
print(f"Modularity score (Q) : {client_modularity:.4f}")

### Communities found
for i, comm in enumerate(sorted(client_communities, key=len, reverse=True)):
    print(f"Community {i+1} ({len(comm)} clients):")
    for member in sorted(list(comm)):
        print(f"\t-{member}")
```

Number of communities detected : 2

Modularity score (Q) : 0.0894

Community 1 (8 clients):

- anti-defamation league
- captains' endowment association of the police department of the city of new york inc the
- correction officers' benevolent association inc
- detectives endowment association police department city of new york inc
- lieutenants benevolent association of the city of new york inc
- new york city central labor council afl-cio
- new york civil liberties union inc
- united jewish appeal-federation of jewish philanthropies of new york inc

Community 2 (4 clients):

- girls for gender equity inc gge
- orange barrel media llc
- service employees international union local 32bj
- urban justice center

After running the code on this, there were 2 communities detected. However, the modularity score is low. At 0.08 there is no meaningful structure behind the lobbying group client data. In other words this isn't a "good" model for the community mapping - at least on the client side. This model does not show us a "good" community mapping/

```
[167]: ### NYCCC Member side, attempting to highlight NYCCC coalitions via lobbying
    ↪client focus.
council_communities = list(nx_comm.greedy_modularity_communities(G_council,
    ↪weight='weight'))
```

```

council_modularity = nx_comm.modularity(G_council, council_communities,
    ↪weight='weight')

council_comm_map = {}
for i, comm in enumerate(sorted(council_communities, key=len, reverse=True)):
    for node in comm:
        council_comm_map[node] = i
### Council Communities and Goodness (modularity)
print(f"Number of communities detected : {len(council_communities)}")
print(f"Modularity score (Q) : {council_modularity:.4f}")

for i, comm in enumerate(sorted(council_communities, key=len, reverse=True)):
    print(f"Community {i+1} ({len(comm)} members):")
    for member in sorted(list(comm)):
        print(f"\t- {member}")

```

```

Number of communities detected : 3
Modularity score (Q) : 0.3676
Community 1 (5 members):
    - nyc council member julie menin
    - nyc council member lynn schulman
    - nyc council member oswald feliz
    - nyc council member shanel thomas-henry
    - nyc council member yusef salaam
Community 2 (4 members):
    - nyc council member darlene mealy
    - nyc council member farah n louis
    - nyc council member mercedes narcisse
    - nyc council member tyrell hankerson
Community 3 (4 members):
    - nyc council member eric dinowitz
    - nyc council member gale brewer
    - nyc council member kevin riley
    - nyc council member nantasha williams

```

There were 3 communities found here. The “goodness” of the model here, at 0.367, indicates there is some groupings among the lobbied NYCCC members that denotes some level of strategy and distinct grouping for which members were lobbied. This denotes that the lobbying entities targeted 3 different communities of council members, these subgroups were targeted by clients with the intention of having the largest impact.

0.1.7 Network Visualizations

[228]: *### The full Bipartite Network of Clients and Council Members*

Main Takeways

- Nantasha Williams and Kevin Riley emerged as the most central council members across all three measures — degree, betweenness, and PageRank.
- Speaker Menin ranked third on PageRank, meaning the lobbying effort attempted to build wider support than just her.
- The client Orange Barrel Media LLC was the top actor by both betweenness and PageRank. This is bizzarre because it is a media firm, not an advocacy group.
- Using constraint scores, assuming those with the lowest were lynchpins of potential atypical coalitions, an attempt was made to model who were the “power Brokers” on each side of this network.
- Lastly, attempts at community / coalition detection showed that there were sub-blocs within this data that showed how siloed this groups are.
- Greedy modularity maximization was used to identify these communities, with the modularity scores acting as a “goodness” metric. The higher value here implies the detected communities are more separated from the others.

Noteworthy Limitations This analysis is inherently limited because the lobbying effort’s and clients positions on the bill are not in the data. It would be interesting to expand this analysis to

all NYCCC Members along with the lobbying parties positions on the bill. In line with this missing information, the analysis is limited to what is formally filed with NYS.
